## Case report: Massive transfusion, ROTEM testing and goal directed fluid therapy in a trauma patient from the ER to the ICU. The challenge to prevent resuscitation coagulopathy

Z. Stergiouda<sup>1</sup>, A. Gkiouliava<sup>1</sup>, E. Koraki<sup>1</sup>, M. Stamatopoulou<sup>1</sup>, K. Bismpa<sup>2</sup>, A. Trikoupi<sup>1</sup> Department of Anesthesiology, <sup>2</sup>Department of Radiology, General Hospital of Thessaloniki "Georgios Papanikolaou" - Thessaloniki (Greece)

## 40% of trauma-related deaths are linked to coagulopathy

ABCDE approach plus ROTEM sample

• Standard monitoring, IBP, invasive CO/SVV, temperature, BIS

12 RBC, 6 FFP, 3 SDP, 2g txa, 6g fibrinogen, 2500IU PCC and 10L crystalloids.
normal ROTEM, SVV = 10
